Keeps out the Sun, let's in the view.

Fabric Care

VistaRange is a synthetic awning fabric designed to let light in yet keep the sun out. Thanks to its PVC coated high tensile polyester inner core and its specially woven construction, VistaRange will keep its long lasting good looks for many years.

Requiring little maintenance, it will not rot and resists mildew, plus it is UV resistant to withstand the harshest weather conditions.

To obtain maximum life from your VistaRange Awning, the following care instructions should be noted:

- Roll up your awning in windy or stormy conditions.
- Avoid rolling up the fabric when wet. If this must happen, the awning should be extended and allowed to dry as soon as possible, once the weather clears.
- Dirt, dust, leaf litter and bird droppings should not be allowed to remain on the fabric and should be removed by light sponging with warm water or use a broom with a soft head.
- Easy to clean: Just brush it down, or wash with water. For stubborn stains use a mild household detergent.
- Keep petrol, oil, solvents, kerosene and other similar fluids away from the fabric.
